

“IN FRONT OF THE COMPETITION
...EXCEEDING THE REQUIREMENTS”

Project Management Office (PMO)

PMO is:

a real time web based system that offers an intuitive and customizable workspace for each user. The design of the system allows users to easily locate and manage information critical to the their respective roles in the project.

Define and Analyze – IPKeys initiates the platform development with a Business Process Analysis (BPA) that allows for an intimate understanding, optimization and alignment of the critical processes.

Architect – IPKeys reviews the networks, applications, skill sets and databases to optimize a cost efficient and scalable PMO platform architecture.

Implement – IPKeys implements the creation of a beta site system to include application and database layers delivered on loaded servers.

Integrate – PMO integration tools connect with and deliver real time Project Management data from finance systems to easy to read customized graphs and tabular reports.

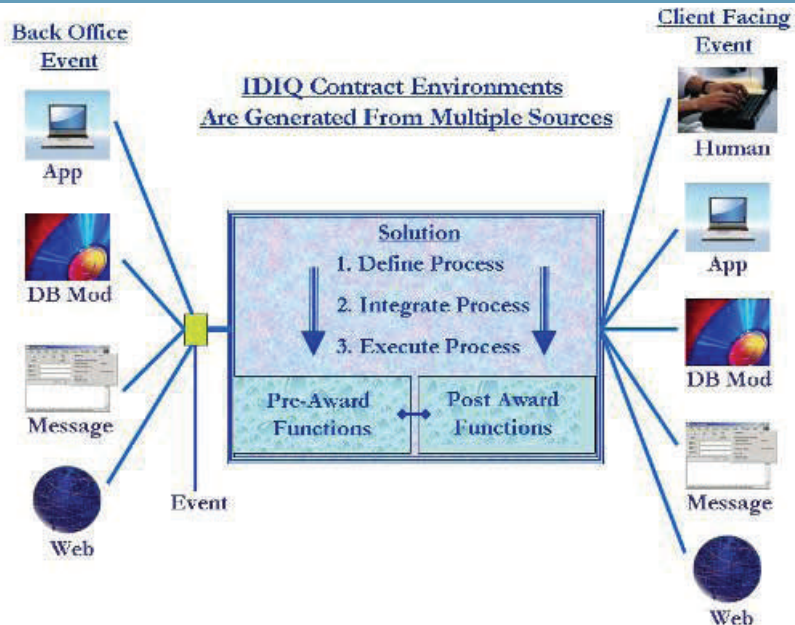

Migrate – PMO data migration tool migrates your archives and data into a cross collaboration and highly secure web platform.

Test – IPKeys performs quality control testing of all the functionality , project reporting and integration.

Launch – IPKeys provides user guide documentation and training.

Follow on – IPKeys continues to develop new customized reports and functionality on a request basis.

The PMO, with its user friendly and customized interface, coupled with the ability to manage both post and pre-award activities, is a tool that truly enables the user. Designed for the Rapid Response and IDIQ environments, PMO is a secure web enabled platform and a proven business multiplier that gathers data and critical communications and transforms it into actionable intelligence providing mission critical insight to achieving operational and strategic goals.

- The IPKeys PMO platform integrates cross enterprise functions and applications that combine business processes, e-mail communications and information technology for project management and business competitive advantage.
- PMO integrates existing project management and business processes that include gaps between people, processes, applications, data and communications.
- PMO increases productivity, reduces operational costs, automates mundane tasks, monitors and alerts on mission critical pending events and thresholds, integrates disparate applications and leverages investments in legacy systems.
- PMO aligns and integrates external partner and management communications with business groups, information technology staffs, enterprise management and accounting systems into one platform.
